A common problem with dropping sensitive cables out of cable mesh is that they can kink if they get pulled too much. The effects of this can result in faulty computer network connections, which in turn can lead to real downtime for your clients’ offices or data centres.

But...you can avoid this problem with the new EzyMesh Drop Out (EMDO) from EzyStrut.

Made from strong, but smooth nylon plastic, it creates a smooth radius for your cables to follow, eliminating the risk of kinks in, and damage to them.

The EMDO is available in 4 colours:

- YELLOW EMDOY
- BLUE EMDOB
- WHITE EMDOW
- SILVER EMDOS

*Other MTO colours are available
